

Fahad J. Kiani

New York City | San Francisco | USA | 347-684-2656

Fjkiani1@gmail.com | www.Github.com/Fjkiani | www.FahadKiani.com

Highly accomplished Solutions Engineer, AWS certified Solutions Architect Professional, and Machine Learning Engineer. Combines extensive expertise in cloud architecture, machine learning, and full-stack web development with a unique interdisciplinary background in molecular biology and computer science to design and deliver scalable, end-to-end AI solutions. Passionate about technical education, mentoring, and thought leadership in emerging technologies

Work Experience

Applied AI Engineer (Security & MCP)

JediLabs.org

08/2023 – Present (Freelance Generative AI focused on improving safety and benchmarks agentically)

- Driving 100% Zero-Trust Identity coverage; engineering OAuth 2.0, and RBAC for 26 production environments, automating tool-layer PHI scrubbing; mitigating enterprise AI security gaps.
- Detecting 6 production failure classes; engineering 40+ MCP servers and 105+ adversarial tasks via Python, FastAPI and Docker— simulating OIDC vulnerabilities; NIST and EU AI Act compliant
- Driving 93.3% clinical accuracy; automating HIPAA-compliant agentic triage via FHIR R4, HL7 and LLMs — engineered 8-hour rapid deployment for real-time clinical operations; Okta-integrated
- Published 2025 Cancer Immunology (AACR B025); deploying Evo2 and AlphaFold via Modal — engineering AI decision with 100% auditability-grade reliability; serverless GPU-accelerated

Senior Solutions Engineer

Talend

05/2021 – 8/2023 (Data integration and cloud transformation)

- Built 100TB+ clinical data lakes; engineering Zero-Trust and PHI scrubbing across 100+ global labs — unifying Apache Spark, Kafka, and Redshift; reduced planning from years to months
- Scaled 100+ ETL pipelines; architecting Kubernetes, Terraform, and AWS across 26 production environments — automating 15-minute CI/CD security pipelines; SOC2 and HIPAA compliant.
- Converted enterprise data chaos into 85% POC-to-win rate via Talend ETL, SQL, AWS Kinesis — closing 1000+ technical discoveries; 500+ Fortune 500 accounts; \$40 ROI per \$1 delivered
- Reduced development time 40% by engineering HIPAA-compliant genomic pipelines via Talend Cloud, Kafka, and Snowflake—processing 1TB+ daily with AWS Firehose integration.
- Drove 50% cost reduction; migrating 300+ ETL jobs via Talend Cloud and Accelerators — architecting AWS, GCP, and Azure multi-cloud infrastructures; achieved zero-downtime
- Achieved 65% reduction in production incidents and \$850K+ in infrastructure savings — optimizing Talend Data Fabric to scale data processing while reducing server support by 75%.

Lead Web Engineering Instructor

Tech Talent Pipeline – College of Staten Island (CUNY)

01/2021 - 05/2021 (Full-stack web development coding bootcamp)

- Accelerated 97% internship placement; architected React, Node.js, MongoDB, SQL production-grade deployments for 40+ CUNY students — New York City-funded Tech Talent Pipeline (TTP)
- Generated 82% employment rate (\$60K+ roles); engineered Express, PostgreSQL, REST API full-stack curriculum, achieved 3x peer employment rate for 40% underrepresented cohort
- Reduced ramp-time 80%; accelerated MERN stack (MongoDB, Express, React, Node.js) development via 2-week Agile sprints — deploying 100% production-ready GitHub repos

Technical Skills

Identity & Security

Okta (OIDC/SAML), Auth0, Zero-Trust Architecture (ZTA)

Programming Languages

JavaScript, Python, TypeScript, Rust, C++

AI Agent Frameworks & Orchestration

Model Context Protocol (MCP), LangChain, Pydantic AI

Genomic AI & Bioinformatics

Evo2 (40B), AlphaFold, Enformer, DepMap

Large Language Models (LLMs)

Claude (Anthropic), Gemini, Grok, Mixtral, OpenAI

Generative AI Infrastructure

AWS, Lambda, Modal, Groq, Hugging Face, Kubernetes

Cloud Platforms (AWS & GCP)

BigQuery, Vertex AI, Firebase, Lambda, S3, SageMaker

Database & Analytics

BigQuery, Vertex AI, Neo4j (Graph), Weaviate (Vector)

Data Visualization

Streamlit, Hex, Looker, Pandas, numPy

Web Development Framework

React.js, Next.js, Vite.js, Django, Node.js

Data Processing & ETL

Spark, Talend, Supabase, Dagster, Snowflake, Redis

Security Frameworks & Compliance

SOC 2 Type II, HIPAA, GDPR, PCI DSS, ISO 27001

Education

BS Computer Science

City University Of New York

2019 – 2021

BS Biology (Pre-Medicine)

John Jay College

Graduated 2015

Software Engineering Bootcamp

Per Scholas

01/2020 - 05/2020

Founding Solutions Architect

1stdibs

08/2017 - 05/2019 (Worlds largest luxury eCommerce)

- Pioneered 1stdibs Trade architecture, deploying GraphQL, REST, Salesforce, Outreach integrations establishing integration playbooks — 5K+ dealer onboarding framework
- Drove a 200% increase in dealer acquisition efficiency by unifying disparate sales and engineering workflows — spearheaded the pre-IPO scaling of a \$250M GMV platform
- Scaled \$1M+ quarterly sales, architected Looker, Elasticsearch, Tableau, Node.js for multi-currency; 28-country rollout — partnered product and engineering to 5M+ monthly users
- Accelerated 40% conversion & 25% dealer growth; architected Tableau & Salesforce dashboards; 50+ bi-quarterly technical demos — end-to-end pre-sales to post-sale global implementations

Founding Solutions Engineer

iMedicare

06/2015 - 07/2017 (SaaS Medicare comparison platform for independent pharmacies)

- Secured a \$177M Omnicell acquisition by scaling the iMedicare platform from 500 to 5K+ pharmacies — achieving 1000% YoY growth through a unified REST/SQL EMR integration layer
- Designed and optimized data models for Salesforce using Looker, REST, and SQL — significantly improving reporting efficiency and contributing to a 30% growth in sales conversion for AEs
- Reduced Medicare enrollment from 3+ hours to 20 minutes — removing manual data entry for Medicare submissions through API integration of EMRs with pharmacy management software
- Accelerated technical pre-sales cycle velocity by 85% — reducing demo-to-sale conversion time from 2 months to 12 days by engineering a standardized MEDDIC qualification framework
- Improved CMS Star Ratings by 0.5 points and increased Medicare enrollment by 18% by architecting API-first layers that removed manual data silos between pharmacy systems
